

Milestone XProtect Central

gives full overview of your organization's multiple video surveillance installations.

The Milestone XProtect Central solution provides central overview for any number of Milestone XProtect Business or Milestone XProtect Retail installations throughout your company – near or far.

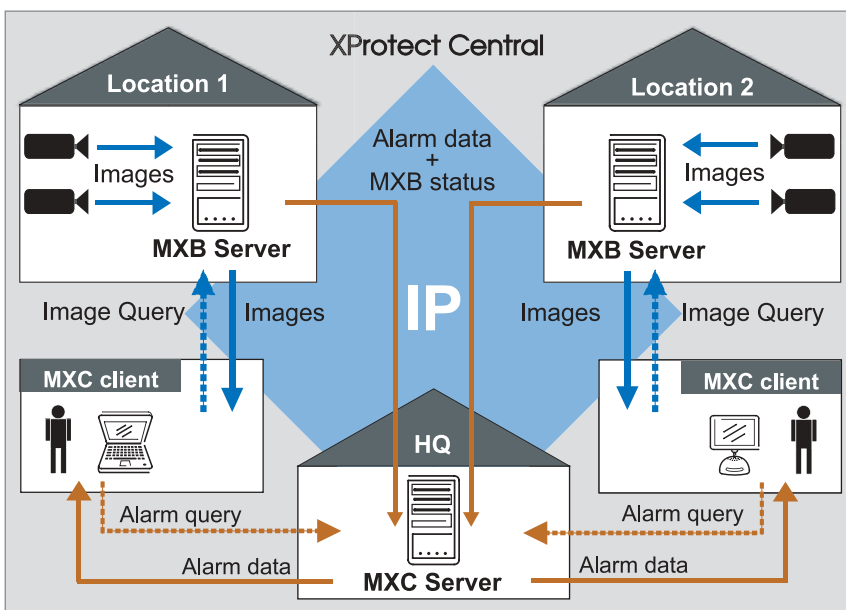

This intelligent monitoring solution uses your company's IP network for central delivery of the following activities, presented in a comprehensive and friendly user interface with full scalability for easy expansions:

- ◆ Visual alarm verifications
- ◆ Virtual rounds via video
- ◆ Central control of all your installations
- ◆ Full knowledge of system status, like information on defective operating units
- ◆ Full audit trails of all alerts and alarm situation handling

XProtect Central gives you the freedom to set up your own private video alarm central – improving your ability to securely protect your business property, assets and employees.

XProtect Central also integrates with security devices such as intruder or access alarms via camera relay inputs.

*MXC gives a total overview of alarm situations and device status in all company locations.
(MXC=Milestone XProtect Central, MXB=Milestone XProtect Business)*

MAIN FEATURES

The Milestone XProtect Central solution provides you with many advanced features:

- ◆ Graphical overview of all alarm related installations and their status
- ◆ Overview of all incoming alarms, including filtering possibilities
- ◆ Control of multiple users handling the same alarms
- ◆ Dynamic Group based set-up of alarm handling: Users can see and handle alarms in different ways
- ◆ Central status of surveillance components: XProtect Business servers, cameras, and Passive Infra Red sensors.
- ◆ Central set-up of surveillance components
- ◆ Multiple number of alarm handlers
- ◆ Generation of audit trail reports
- ◆ Central persistent storage (logging) of all alarms and system information
- ◆ Integration to other IP-based alarm sources through open protocol communication (XML)

FUNCTIONALITY

The system is a client/server application with a Windows 2000+ server and a Microsoft Access database installed.

ARCHITECTURE

The Milestone XProtect Central Solution is hierarchically built. This enables you to create your own graphical structure, for example, based on geography, trade segments or number of installations per alarm handler.

ACCESS

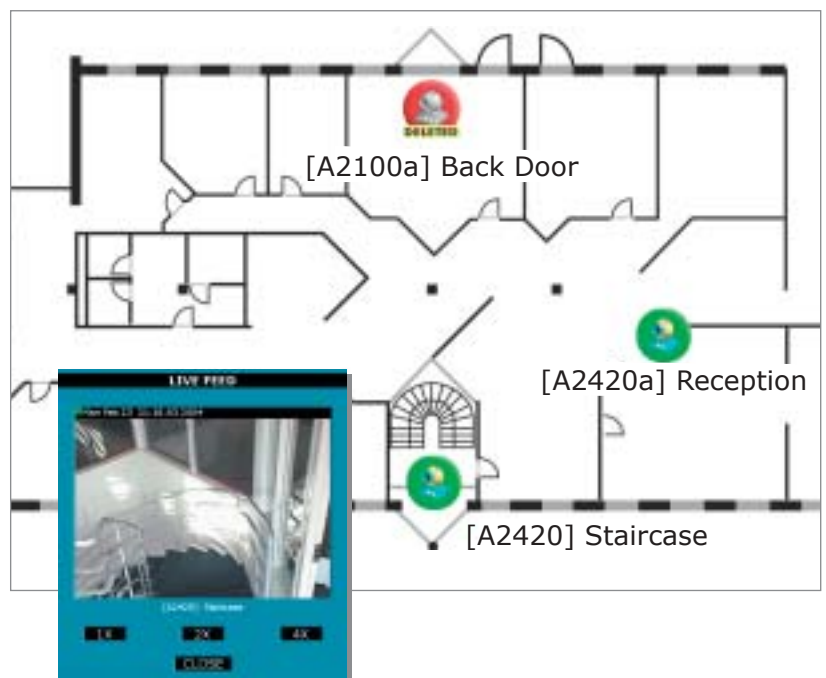

You get integrated user access control for all components, once the users have been granted rights.

USER INTERFACE

Both the administrator and the alarm handlers have access to the user interface through a standard Internet Explorer version 6.0 or higher.

USER-FRIENDLY

The system has a built-in intuitive graphical interface for you to set up and view your surveillance installations, using "drag and drop" for simple operation.

MINIMUM SYSTEM REQUIREMENTS:

Milestone XProtect Central operates together with Milestone XProtect Business software.

XProtect Central Server:

CPU: P4
Memory: 256 Mbyte (Rec. 512Mbyte)
Video: PCI 1024x768
OS: Windows 2000, Windows XP
Software: Microsoft Access is recommended

XProtect Central Client:

CPU: P4 min. 2,4GHz (Rec. 3GHz)
Memory: 512Mbyte (Rec. 1Gbyte)
Video: PCI 1024x768
(Rec. AGP 1600x1200)
OS: Windows 2000, Windows XP
